

7th German-Japanese | 7th International
Symposium on Nanostructures

*March 2-4, 2014
Wenden/Olpe, Germany*

RUSNANO
Russian Corporation of Nanotechnologies

address by

Anatoli Chubais, CEO at RUSNANO

for the

7th German-Japanese / 7th International Symposium on Nanostructures

March 2-4, 2014 at Wenden/Olpe, Germany

The mission of RUSNANO is Nanotechnology in, for and from Russia for a better world. Insofar we are very well aware of the importance and potential of nanomaterials and likewise nanostructured materials for the future and already for today, generating massive value in an interdisciplinary role in natural sciences, bio-medicine and materials science.

Particularly for a fast growing economy with fast growing demands for everyday life such as energy and transportation and at the same time for nature conservation and resources saving, innovative high technology is a major key for new products and processes for society success.

Any technology needs materials and not only for miniaturization but also for broad and lasting availability, the utilization grade of materials must be increased which means smaller units must provide more function and next to this such smaller units at larger surface can also provide new and better benefits.

The Seventh OZ-Symposium on Nanostructures is a visible expression of mankind seeking future and certainly international expertise will again be presenting latest understandings and approaches in the cutting-edge technology field of NANO.

I wish the conference much of success, new ideas and best interaction.
